Touch monitor 15" customized glass indoor

Essential design and well industrialized

15" monitor with 500 cd/m² TFT bonded to a dual 4+1 mm glass using OCR (Optical Clear Resin) technique, featuring Anti-Glare treatment. The cover glass is designed to protrude and align flush with the structure of the door/mechanical framework, providing a compact and elegant design for the customer's machine. The brackets, positioned on the long sides, allow the monitor's depth adjustment and replicate the internal attachment points of the customer's machinery. A gasket completes the structure, preventing the ingress of dirt or water into the machine.
